# ACETYL MIGRATION OF TRICHILINS WITH ZINC BOROHYDRIDE 

by<br>Munehiro Nakatani* and Koji NakaniShi**

(Received August 28, 1992)

#### Abstract

s Treatment of trichilin A (1a), insect antifeedant limonoid, with zinc borohydride in 2 propanol led to acyl migration in ring A and gave its 1,2 -diacetyl and 1,3 -diacetyl isomers. Similar treatment of trichilin B ( $\mathbf{1 b}, 12$-epimer of $\mathbf{1 a}$ ) and its 7,12 -diacetate also induced 1,3-and 1,2 -acetyl migrations.

Key words: Acyl migration, Zinc borohydride, Trichilins, Limonoid, Antifeedant

## Introduction

Trichilin A and B (1a and 1b) are insect antifeeding limonoids from East African medicinal plant Trichilia roka. ${ }^{1,2)}$ In structural and structure/activity relation studies, their 11-hydroxy derivatives were particulary interesting, for the potent active were the compounds with a $12-\mathrm{OH}$ function, independent of the substitution pattern in ring A. A 11-hydroxy-12-oxo isomer (trichilin C) was inactive. ${ }^{3)}$ As trichilins are sensitive to

Fig. 1

[^0]traces of acid or base, treatment of $\mathbf{1 a}$ with neutral zinc borohydride in attempt to reduce the 11 -one led unexpectedly to acyl migration in ring A and gave a mixture of $\mathbf{1 a}$ and its 1,2 -diacetyl $\mathbf{2 a}$ and 1,3 -diacetyl isomers $3 \mathbf{a}$ derived by 1,3 or 1,2 -shift of acetyl group. Similar treatment of trichilin B (1b) and its 7,12-diacetate (1c) also induced a similar acetyl migration.

## Results and Discussion

When a solution of $\mathbf{1 a}(10 \mathrm{mg}, 0.015 \mathrm{mmol})$ and 1.3 M ether solution ( 0.1 ml , 0.13 mmol ) of zinc borohydride ${ }^{4)}$ in dry 2 -propanol ( 0.5 ml ) was stirred at room temperature for 40 h , the product gave two compounds, $\mathbf{2 a}(6 \%)$ and $\mathbf{3 a}(11 \%)$ along with 1a ( $79 \%$ ) (Scheme 1 and Table 1). This reaction did not reduce the 11 -keto group and the products, $\mathbf{2 a}$ and 3 a, showed $n-\pi^{*}$ absorption of $=\mathrm{C}=0$ at $303(\Delta \varepsilon-$ 4.3) and $300 \mathrm{~nm}(\Delta \varepsilon-3.7)$ in their CD spectra, respectively. Both $\mathbf{2 a}$ and $\mathbf{3 a}$ had the same molecular formula, $\mathrm{C}_{35} \mathrm{H}_{46} \mathrm{O}_{13}$, as $\mathbf{1 a}$ and their ${ }^{1} \mathrm{H}$ NMR spectra were also very simular to that of $\mathbf{1 a}$ except for the acylation pattern in ring A (Table 2). The acylation pattern in 1a, namely, that $\mathbf{1 a}$ has a free $1-\mathrm{OH}$, was shown by the fact that the $9-\mathrm{H}$ signal in $\mathbf{1 a}$ was at $\delta 4.72$, whereas in $\mathbf{2 a}$ (1,2-diacetate) and $\mathbf{3 a}$ ( 1,3 -diacetate) they were shifted upfield to $\delta 4.13$ and 4.17 , respectively. The low shift of $\delta 4.72$ in 1 a has been attributed to the effect of the $1-\mathrm{OH}$ in a 1,3 -diaxial relation (Fig. 1). The isomers, $\mathbf{2 a}$ and $\mathbf{3 a}$, were identical with trichilin F and E isolated from $T$. roka. ${ }^{5)}$

Table 1. Acetyl Migration of Trichilins with Zinc Borohydride

| Compound | Solvent | Reaction <br> time, h |  | Products, Yields $\%$ | Recovered, $\%$ |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{1 a}$ | 2-Propanol | 40 | $\mathbf{2 a}$ | 6 | $\mathbf{3 a}$ | 11 | 79 |
| $\mathbf{1 b}$ | 2-Propanol | 50 | $\mathbf{2 b}$ | 4 | $\mathbf{3 b}$ | 2 | 88 |
| $\mathbf{1 c}$ | 2-Propanol | 30 | $\mathbf{2 c}$ | 30 | $\mathbf{3 c}$ | 23 | 45 |
| $\mathbf{1 c}$ | EtOH | 17 | $\mathbf{2 c}$ | 13 | $\mathbf{3 c}$ | 7 | 75 |

As in the case of $\mathbf{1 a}$, the treatment of trichilin B (1b) having same acylation pattern with $\mathbf{1 a}$ in ring A induced acyl migration to give its 1,2 -diacetate $\mathbf{2 b}$ ( $4 \%$ ) and 1,3 -diacetate $\mathbf{3 d}(2 \%)$, the latter of which was identifield as the cytotoxic aphanastatin. ${ }^{6}$ ) As its structure has been determined by X-ray analysis, this novel conversion established the structure of trichilin B. When 7,12-diacetyltrichilin B (1c) was treated with zine borohydride, the reaction proceeded smoothly, yielding 1,2-diacetate $\mathbf{2 c}$ ( $30 \%$ ) and 1,3diacetate $3 \mathbf{c}(23 \%)$. The reaction of $\mathbf{1 c}$ in ethanol also gave a similar result to that in propanol (Table 1).

These results suggest that the 2 - or 3 -acetyl group in 1 would migrate to 1 -position via five- or six-membered cyclic intermediate such as 4 (Fig. 2) to give the isomers, 3 or 2, and that this acetyl migration would have been affected by another OH function or by the conformational change of the ring C in $\mathbf{1}$.

Inspite of the change of the acylation pattern in ring A , the reaction products of $\mathbf{2 a - c}$ and 3a-c showed similar antifeeding activities (leaf disk method), ${ }^{7)}$ respectively, with their starting materials, 1a-c, against a North American pest insect, Spodoptara eridania.

Fig. 2

## Experimental

${ }^{1} \mathrm{H}$ NMR spectra were measured in $\mathrm{CDCI}_{3}$ at 250 MHz . UV and CD spectra were measured in MeOH . Final purification of compounds was done by HPLC with adsorption column using a $\mathrm{MeOH} / \mathrm{CH}_{2} \mathrm{Cl}_{2}$ solvent system.

Trichilin A (1a) and B (1b). Trichilin A (1a) and B (1b) were isolated from African Meliaceae plant T. roka. ${ }^{1)}$ 1a: $\mathrm{C}_{35} \mathrm{H}_{46} \mathrm{O}_{13}$; UV 213 nm ( $\varepsilon$ 4050) ; CD $213(\Delta \varepsilon+$ 2.5) and $304 \mathrm{~nm}(\Delta \varepsilon-3.7)$. 1b: $\mathrm{C}_{35} \mathrm{H}_{46} \mathrm{O}_{13}$; UV $209 \mathrm{~nm}(\varepsilon 4600)$; CD $217(\Delta \varepsilon+1.2)$ and $306 \mathrm{~nm}(\Delta \varepsilon-1.9)$.

7,12-Diacetyltrichilin B (1c). Trichilin B (1b, 15 mg ) was acetylated with $\mathrm{Ac}_{2} \mathrm{O}$ in pyridine at $55^{\circ} \mathrm{C}$ for 30 h to give the 12 -acetate ( 2 mg ) and 7,12 -diacetate ( $\mathbf{1 c}, 8 \mathrm{mg}$ ). 1c: $\mathrm{C}_{39} \mathrm{H}_{50} \mathrm{O}_{15}$; CI-MS m/z $759(\mathrm{M}+1)^{+}$; UV $210 \mathrm{~nm}(\varepsilon 4200)$; CD $215(\Delta \varepsilon+1.9)$ and $305 \mathrm{~nm}(\Delta \varepsilon-2.3)$. 12-Acetyltrichilin B: $\mathrm{C}_{37} \mathrm{H}_{48} \mathrm{O}_{14}$; CI-MS m/z 717 (M+1); UV 210

[^1]$\mathrm{nm}(\varepsilon 4100)$; CD $215(\Delta \varepsilon+1.5)$ and $305 \mathrm{~nm}(\Delta \varepsilon-2.2) ;{ }^{1} \mathrm{H}$ NMR $\delta 0.81(3 \mathrm{H}, \mathrm{s}), 0.89$ $(3 \mathrm{H}, \mathrm{t}, \mathrm{J}=7.2), 1.15(3 \mathrm{H}, \mathrm{s}), 1.17(3 \mathrm{H}, \mathrm{d}, \mathrm{J}=6.8), 1.33(3 \mathrm{H}, \mathrm{s}), 1.95,2.00,2.10$ (each $3 \mathrm{H}, \mathrm{s}, \mathrm{OAc}), 3.67(1 \mathrm{H}, \mathrm{m}), 3.74(1 \mathrm{H}, \mathrm{s}), 4.32(1 \mathrm{H}, \mathrm{s}), 4.41(1 \mathrm{H}, \mathrm{t}, \mathrm{J}=4.5)$, $4.61(1 \mathrm{H}, \mathrm{s}), 5.40(1 \mathrm{H}, \mathrm{s}, 12-\mathrm{H}), 5.50(1 \mathrm{H}, \mathrm{d}, \mathrm{J}=4.6), 5.74(1 \mathrm{H}, \mathrm{s}), 5.88(1 \mathrm{H}, \mathrm{t}, \mathrm{J}=$ 4.6), 6.10, 7.10, 7.31 (each 1 H , furan).

General procedure for treatment of 1 with zinc borohydride. A solution of the compound $1(10 \mathrm{mg}, 0.015 \mathrm{mmol})$ in dry 2 -propanol ( 0.5 ml ) was stirred with 1.3 M ether solution ( $0.1 \mathrm{ml}, 0.13 \mathrm{mmol}$ ) of zinc borohydride for 40 h at room temperature and then acetone ( 1 ml ) was added. After an additional stirring of 2 h , the reacion products were purified by column chromatography and HPLC.

Reaction products. 2a: CI-MS m/z $675(\mathrm{M}+1)^{+}$; UV $210 \mathrm{~nm}(\varepsilon 5100)$; CD 211 $(\Delta \varepsilon+2.2)$ and $303 \mathrm{~nm}(\Delta \varepsilon-4.3)$. 3a: CI-MS m/z 675 (M+1) ${ }^{+}$; UV $215 \mathrm{~nm}(\varepsilon$ 4100) ; CD $211(\Delta \varepsilon+2.7)$ and $300 \mathrm{~nm}(\Delta \varepsilon-3.7)$. 2b: CI-MS m/z $675(\mathrm{M}+1)^{+}$; UV $209 \mathrm{~nm}(\varepsilon 4300)$; CD $214(\Delta \varepsilon+1.6)$ and $306 \mathrm{~nm}(\Delta \varepsilon-2.0)$. 3b: CI-MS m/z 675 (M $+1)^{+}$; UV $209 \mathrm{~nm}(\varepsilon 4000)$; CD $214(\Delta \varepsilon+1.4)$ and $304 \mathrm{~nm}(\Delta \varepsilon-2.9)$. 2c: CI-MS $\mathrm{m} / \mathrm{z} 759(\mathrm{M}+1)^{+}$. 3c: CI-MS m/z $759(\mathrm{M}+1)^{+}$.

## Acknowledgement

The authors are grateful to Dr. K. Yoshihara, Suntory Institute for Bioorganic Research, for the supply of zinc borohydride.
