---

The authors regret that in the abstract '**Fisher's exact test and Cochran's Q test were used to compare response frequency among departments and desired collaborators in each faculty, respectively.**' should be replaced to '**Chi-square test and Kruskal-wallis test were used to test the comparison of response rate and time of classes among departments. The Cochran's Q test was used for paired data to compare the frequency of responses of the desired collaborators in each faculty.**'. Furthermore, in the data analysis '**Fisher's exact test was used to compare response frequency among departments. The Cochran's Q test was used for paired data to compare the frequency of responses of the desired collaborators in each faculty.**' should be replaced to '**Chi-square test and Kruskal-wallis test were used to test the comparison of response rate and time of classes among departments. The Cochran's Q test was used for paired data to compare the frequency of responses of the desired collaborators in each faculty. P value less than 0.05 was considered statistically significant.**'
