

Figure 7—Immunogenicity of BSAs in an adult male JW/CSK rabbit. The anti-BSA response after the rabbit's secondary immunization was evaluated by noncompetitive ELISA, and the results are shown as ELISA values (absorbance at 405 nm). Each value is the mean  $\pm$  SD ( $n = 4$ ). Values with different letters are significantly different at  $p < 0.05$  as determined by Student's  $t$ -test. For definitions of N, DH, MP, PP, and PP-MP, see Figure 1.
